

CS 440 Meeting Minutes

Group 5 Date: 3 March 2023 Time: 2pm Duration: 30 mins

Present, on time: Russel Tjahjadi, Mohammad Zaid, Arijus Trakymas , Sharva Darpan Thakur

Present, not on time: N/A

Absent: N/A

Synopsis: We have decided to work on the features outlined in scenario 2 and divided the tasks equally in Jira. We have started doing more research on how to implement the features outlined in the second scenario.

Recent Accomplishments: Russel has finished designing how the user profile section should look like. Arijus and Zaid have worked on sending the user inputs to the API and seeing what data gets returned. Sharva has researched and looked into a tool that will help store the user input preferences in the cloud.

Current Activities: Russel is looking into how to implement the user's preferences in the profile section so that the user can change their preferences if they feel like it. Sharva is working on implementing to show the user nearby grocery stores. Arijus is working on implementing to display user recipes based on their preferences. Zaid is working on keeping the user logged in if they have already logged in so that the user does not have to enter their credentials every time they open the app.

Action Items: Russel will work on implementing showing the user restaurants in the case where the user does not want to cook. Zaid will finish implementing keeping the user logged in once they log in once. Arijus and Sharva will find a way to store the data in the cloud using the tool that is found.
